

RADIOLOGY REPORT

Department of Radiology
Medical Imaging Center

PATIENT INFORMATION

Patient Name: Ardell826 Contessa946 Brown30
Patient ID: 6388365c-771a-7589-d108-c212974ba41e
Date of Birth: 03/24/1974
Gender: female

STUDY INFORMATION

Study Date: 05/25/2023
Modality: CT
Anatomical Region: abdomen
Study UID: 1.2.840.113654.2.55.123456789012345678901234567890.27

CLINICAL INDICATION

Evaluation for suspected malignancy. Clinical correlation requested.

TECHNIQUE

Contrast-enhanced CT examination of the abdomen was performed following administration of intravenous contrast material. Multiplanar reconstructions were obtained.

FINDINGS

There is a 5.4 cm spiculated mass in the right lower lobe of the lung. The mass demonstrates irregular margins and appears to invade the adjacent pleura. Associated mediastinal lymphadenopathy is noted, with enlarged lymph nodes measuring up to 2.7 cm in the subcarinal station.

No pleural effusion is identified. The remaining lung parenchyma shows no acute abnormality. The heart size is within normal limits.

IMPRESSION:

1. Suspicious lung mass in the right lower lobe with features concerning for primary lung malignancy. Clinical correlation and tissue diagnosis recommended. 2. Mediastinal lymphadenopathy, likely representing nodal metastases.

Dr. Michael Chen, MD

Board Certified Radiologist
