

# RADIOLOGY REPORT

Department of Radiology  
Medical Imaging Center

---

## PATIENT INFORMATION

Patient Name: Edwardo860 Rickie717 O'Kon634  
Patient ID: 90a04394-7aea-d880-e43a-f507d5829e0d  
Date of Birth: 02/26/1943  
Gender: male

---

## STUDY INFORMATION

Study Date: 06/10/2023  
Modality: CT  
Anatomical Region: chest  
Study UID: 1.2.840.113654.2.55.123456789012345678901234567890.30

---

## CLINICAL INDICATION

Evaluation for suspected malignancy. Clinical correlation requested.

---

## TECHNIQUE

Contrast-enhanced CT examination of the chest was performed following administration of intravenous contrast material. Multiplanar reconstructions were obtained.

---

## FINDINGS

There is a 3.0 cm spiculated mass in the right lower lobe of the lung. The mass demonstrates irregular margins and appears to invade the adjacent pleura. Associated mediastinal lymphadenopathy is noted, with enlarged lymph nodes measuring up to 1.5 cm in the paratracheal station.

No pleural effusion is identified. The remaining lung parenchyma shows no acute abnormality. The heart size is within normal limits.

## IMPRESSION:

1. Suspicious lung mass in the right lower lobe with features concerning for primary lung malignancy. Clinical correlation and tissue diagnosis recommended. 2. Mediastinal lymphadenopathy, likely representing nodal metastases.
